# aPriori

aP Workspace

Turn insights into action with aPriori's collaboration and task management application

Transform aPriori-generated insights into actionable next steps that accelerate the product development process. aP Workspace allows users to review and act on cost, manufacturability, and sustainability insights to accelerate time-to-market with confidence.

Innovate rapidly by unifying product development sourcing and manufacturing teams in a powerful virtual co-working space

aP Workspace Highlights

aP Workspace is a cloud application within aPriori's Manufacturing Insights Platform that enables users to create and manage scenario tasks, and collaborate in real time with internal stakeholders. Users can tag colleagues to pose questions, comments, and assign follow-up actions on product cost, design guidance, manufacturability, and product carbon footprint to speed up the product development cycle.
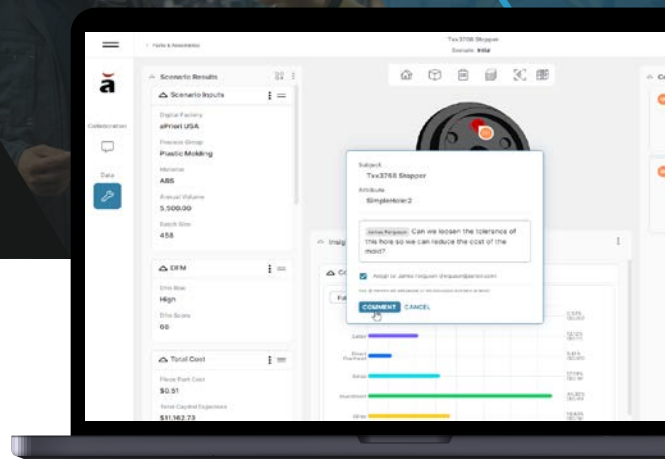

Collaboration in Context

Project stakeholders can ask questions, offer feedback and assign tasks directly on the geometry of the 3D model or on aPriori-generated cost, manufacturability and sustainability insights. This enables streamlined communication, early visibility, and faster decision making across the product development cycle.

Organize & Take Action

Manage product scenarios at scale using efficient task management solutions that enable you to prioritize critical tasks, get updates on items that require your input, and optimize your time for value-added activities.

Traceability & Decision History

Changes to design scenarios in aPriori are automatically updated in aP Workspace — ensuring that users always have access to the latest information for analysis and collaboration. And, aP Workspace maintains a system of record to help users understand product design decisions past or present throughout the product lifecycle.

Unlock value in your digital twins with automated manufacturing insights that include:

Product Cost Management
- Should cost
- Make vs. buy

Sustainability
- CO_2e footprint
- Design for Sustainability

Design Guidance
- Design for Manufacturability (DFM)
- Design to Cost (DTC)

Manufacturing Optimization
- Machine selection
- Process routing

aP Workspace Features and Benefits

1 3D Modeling & Data Commenting
Add context to data insights by directly commenting on 3D models & data fields

2 Real-time Collaboration
Connect with teams in one space on the same data

3 Task Management
Improve productivity by prioritizing tasks based on importance and relevance

4 Detailed Data & Insights
Drive faster decision-making using detailed data insights
